Project Overview

Overview

- Analyzed a synthetic PhonePe-inspired payment transaction dataset.
- Built an interactive Power BI dashboard to monitor payment performance and customer behavior.
- Analyzed transaction volume, transaction value, payment status, services, demographics, and usage patterns.
- Converted raw transaction data into KPIs, visual insights, and business recommendations.

Business Goal

To provide a centralized dashboard for understanding payment performance and identifying opportunities for business improvement.

Project Objectives & Dataset

Project Objectives

- 1 Analyze transaction volume and transaction value.
- 2 Monitor payment success, failed, and pending transactions.
- 3 Identify high-value customer segments.
- 4 Evaluate service-wise transaction performance.
- 5 Analyze monthly and weekday/weekend trends.
- 6 Generate actionable business recommendations.

Dataset Overview

3,00,000

Transactions

1,07,658

Key Business Insights

Transaction Performance

₹3.47B in transaction value generated from ~3,00,000 transactions.

+8.97% growth in transaction volume.

+8.98% growth in transaction value.

96% payment success rate — strong payment reliability.

Customer & Usage Insights

74.5% of transaction value contributed by Gen X + Millennials.

71.6% of transactions occurred on weekdays.

12.5% of total transactions were UPI ID transfers.

72.9% of transaction value contributed by Loans.

Business Recommendations

- 1

Investigate and reduce the causes of failed transactions.
- 2

Improve the user experience for high-value services such as Loans and Insurance.
- 3

Launch targeted campaigns to increase weekend transaction activity.
- 4

Develop personalized strategies for high-value customer segments.
- 5

Increase engagement among lower-contributing customer segments.
- 6

Monitor transaction growth and payment success KPIs regularly.

CONCLUSION

Project Summary

Developed an interactive PhonePe Payment Analytics Dashboard using Excel, Power Query, Power BI, and DAX.

Analyzed 300K transactions across 107K+ users.

Identified key patterns in payment performance, customer segments, service categories, and transaction behavior.

Converted analytical findings into actionable business recommendations.

Key Learning

This project strengthened my ability to transform raw data into interactive dashboards and translate business data into actionable insights.

Thank You
